SUSTAINABILITY

"Sustainable manufacturing is the creation of manufactured products through economically-sound processes that minimize negative environmental impacts while conserving energy and natural resources. Sustainable manufacturing also enhances employee, community, and product safety."

- United States Environmental Protection Agency

Sustainability requires ingenuity and stewardship. Did you know Pigging Solutions pigging systems help you achieve your sustainable manufacturing goals AND provide rapid return on investment.

How? Our systems **recover over 99% of product in transfer piping**. Recovering trapped product from transfer lines that would otherwise become flush-waste, means you can increase batch yields and eliminate flush waste. **From raw materials to finished product, if you can pump it, we can pig it.**

What are the many cost saving benefits that generate ROI within 12 months?

- + Recovery and sale of previously lost product from transfer lines
- + Significantly reduce or eliminate transfer line flushing and waste
- + Eliminate product cross-contamination risk
- + Higher finished product batch yields
- + Supports sustainable manufacturing goals
- + Accommodates a diverse product line and smaller filling runs
- + Promotes a more competitive market position and lower operating cost
- + Rapid payback and ROI

To learn more, call one of our industry specialist to set up a meeting or complimentary site visit to review your current transfer process and applicable pigging solutions. We also encourage you to visit our website where you will find typical pigging system sketches.

CONCEPT SKETCH

- Recover trapped/sellable product
- Eliminate line flush waste
- Eliminate cross-contamination risk
- Reduce dedicated piping cost
- **Supports sustainable manufacturing**
- Rapid paybacks and high ROI
- Promotes competitive advantage
