PIGGING & AGRICULTURAL CHEMICALS

Pigging Solutions knows that for companies engaged in the manufacturing of herbicides, pesticides, and fertilizers productivity, product quality, and concern for operator safety and the environment plays a pivotal role in their manufacturing process.

Pigging Solutions pigging systems provide the capability to safely and cost-effectively transfer your valuable agricultural chemicals between manufacturing, packaging, and bulk loading. Our pigging systems recover over 99% of the product trapped in transfer piping which leaves the line empty and ready for the next transfer without line flushing, product waste, and cross-contamination risk.

We work with our customers to provide pigging systems to meet their specific application needs. Our objective is to supply each client with the most effective mix of components and services for their application needs based on available financial, technical, and operational resources.

What are the benefits to you as a chemical manufacturer?

- + Recovery of previously lost and saleable product
- + Eliminate transfer line flushing and cross-contamination risk
- + Flexibility to handle a diverse product line without dedicated piping
- + Promotes sustainable manufacturing goals
- + Rapid payback and high return on investment
- + Competitive marketplace edge

And when it comes to Safety, Pigging Solutions systems incorporate industry leading technology such as the patented LQC pressure locking quick access safety closure. All pig launchers are equipped with the LQC which allows safe and quick access to pigs in seconds. The LQC comes off with just a quarter turn and will move to a sealed and locking position if there is pressure remaining in the line keeping operators and the environment safe from product exposure.

Whether your application calls for simple transfers from point-to-point or more robust transfers from multiple sources to multiple destinations, Pigging Solutions has manual and automated systems, manifolds, and piggable valves to meet the application requirements.

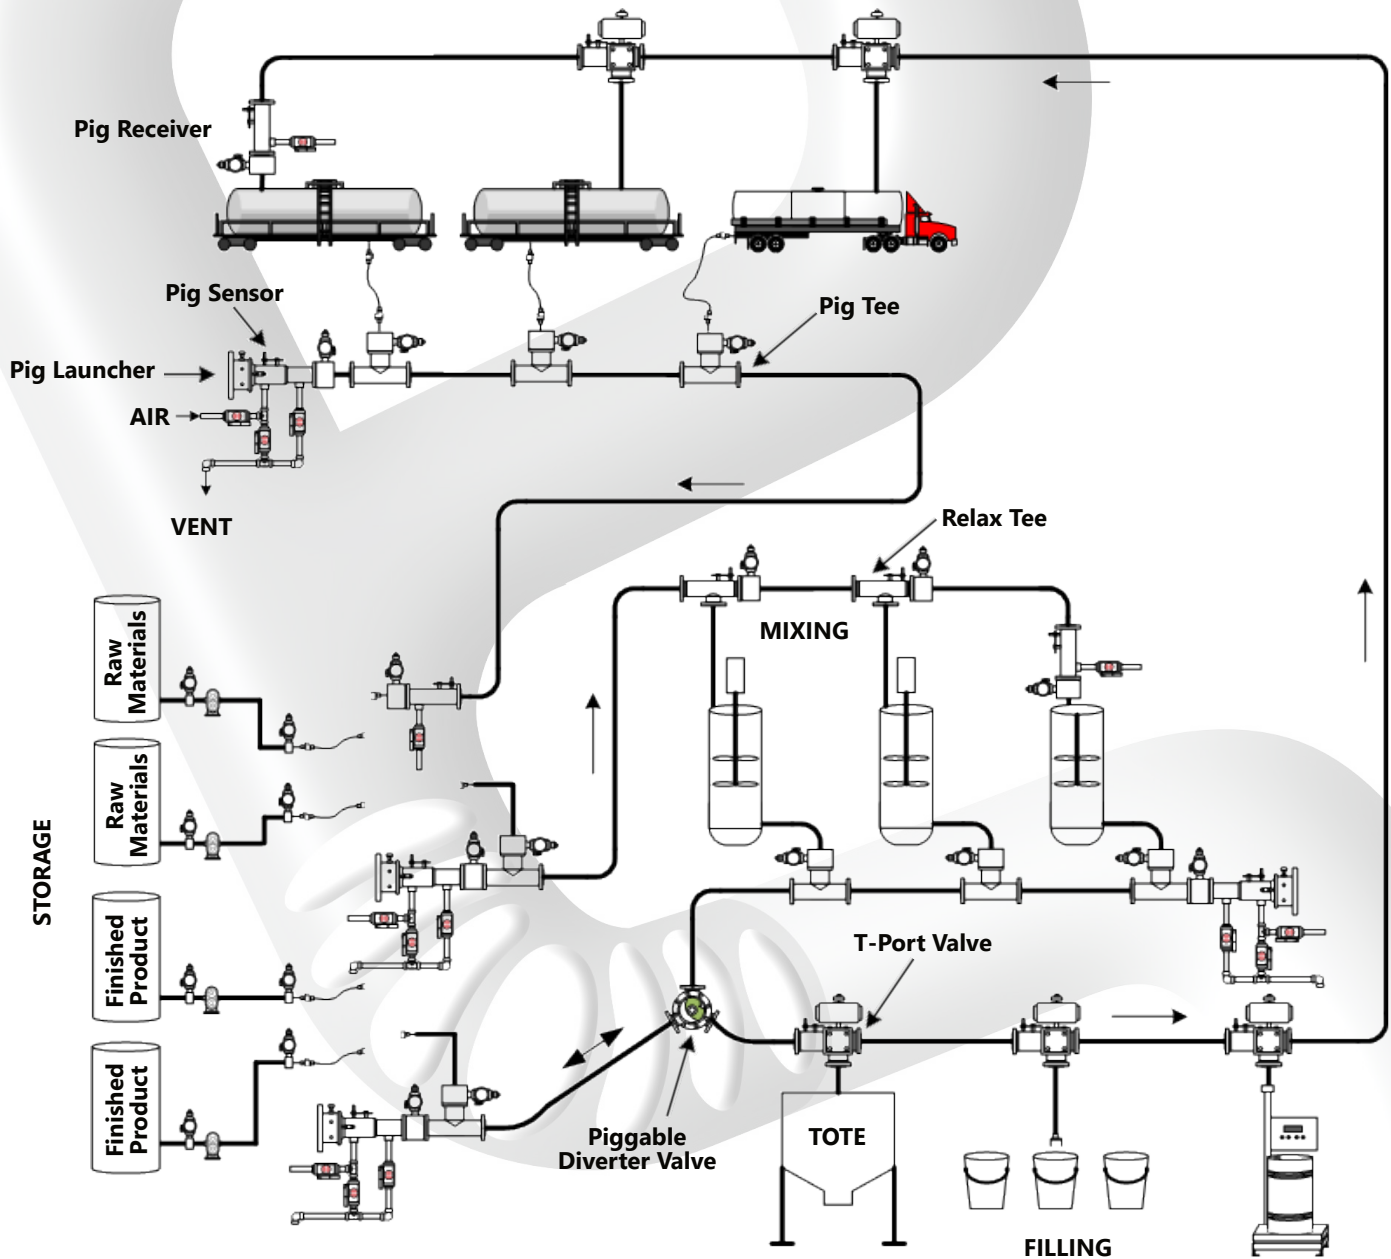

Want to know more about how a pigging system would benefit your manufacturing process? Contact an industry expert at Pigging Solutions for a complementary application review.
