PIGGING & PET FOOD

Pigging Solutions will provide significant saving to pet food manufacturers. Whether transferring meat slurry or wet pet food our pigging systems will recover the product from your transfer lines.

Without product loss, line flushing, cross-contamination risk and excessive dedicated piping, Pigging Solutions pigging systems provide the capability to transfer your valuable pet food products between the various grinding, emulsifying, extruding, mixing and cooking, and filling operations. Our pigging systems can recover over 99% of the product trapped in your pet food transfer lines which leaves the pipe walls clean and the transfer line ready for the next product transfer. We work directly with our pet food clients to design systems meeting their specific application needs and can accommodate challenging applications such as high temperatures, thick viscosity, and a wide range of product types and recipes.

What are the many cost saving benefits to you as a pet food manufacturer?

- + Recovery and sale of previously lost product from transfer lines
- + Reduced line sanitation time, water consumption, and cost
- + Eliminate product cross-contamination risk
- + Higher manufacturing batch yields
- + Supports sustainable manufacturing goals
- + Accommodates a diverse product line and smaller filling runs
- + Promotes a more competitive market position and lower operating cost
- + Rapid payback and ROI

Why choose Pigging Solutions?

- + Industry Knowledge. We understand the pet food manufacturing process and can design cost effective systems for your specific application requirements.
- + Safety and Ease-Of-Use. All pig launchers are equipped with the patented LQC pressure locking safety closure, providing safe access to pigs for routine maintenance in less than 15 seconds protecting operators and the environment from spills and injury.
- + Wide Range Of Solutions. Whether your pet food transfer application calls for a simple manually operated point-to-point system or you have a need for an automated system to make simultaneous transfers from multiple sources to multiple destinations, Pigging Solutions will work with you to develop a pigging system that meets your specific application needs.
- + On-Site Services. Pigging Solutions will work with you or your contractor to ensure proper installation and then can be available on-site during startup for commissioning and training.

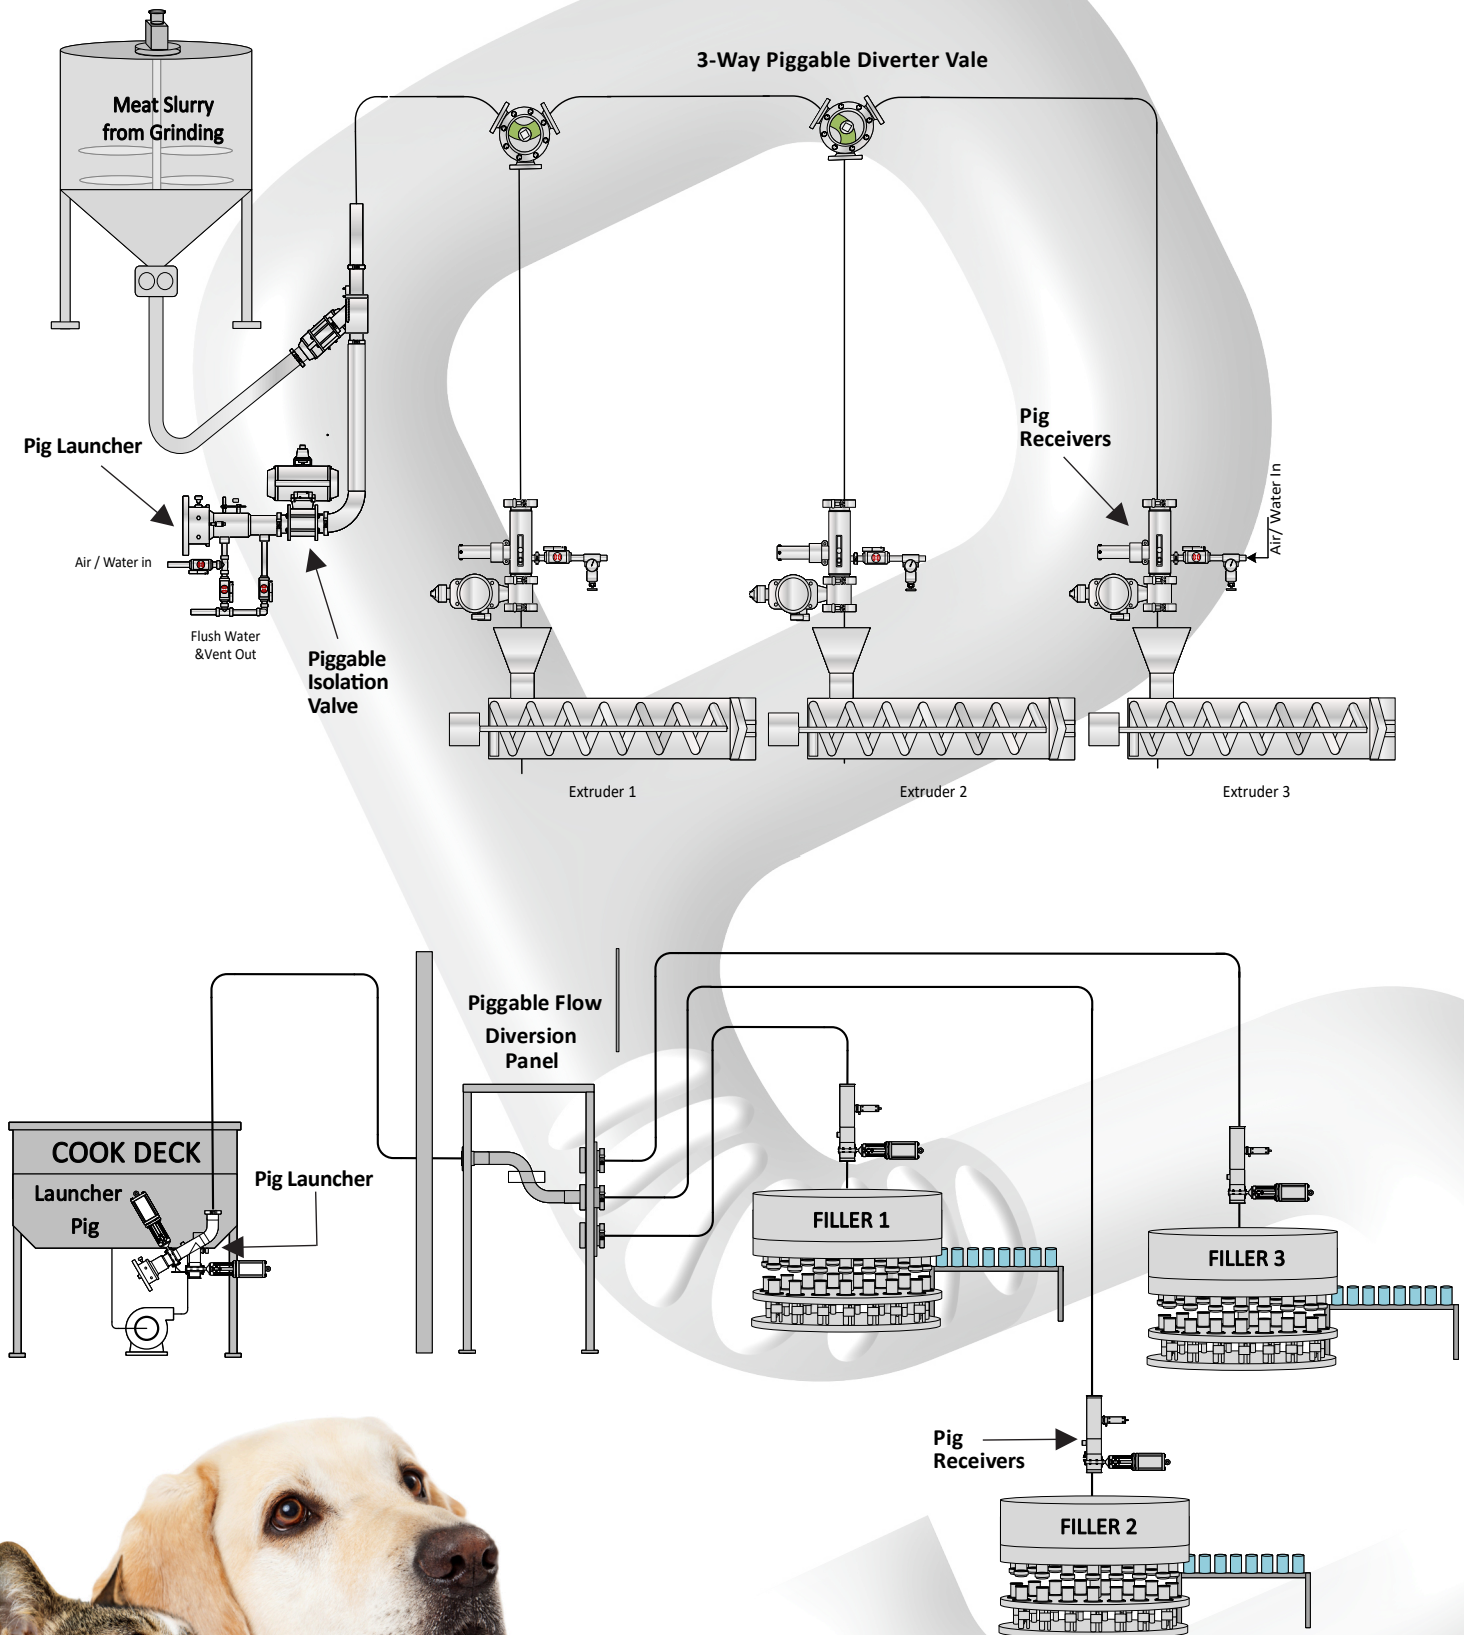

To learn more, call our industry specialist to set up a meeting or complimentary site visit to review your pet food transfer process and applicable pigging solutions. We also encourage you to visit our website where you will find typical pigging system sketches.
