PIGGING & ENGINEERING PARTNERSHIPS

Major project award is the life blood of engineering firms. Incorporating pigging technology into projects helps engineering firms lower project cost and increase award rates.

- + Reduces piping and installation cost by using a smaller number of common transfer lines vs a higher number of dedicated transfer lines.
- + Increases flexibility for product line growth without the additional expense of more dedicated piping.
- + Eliminates cross-contamination risk and product waste traditionally associated with the use of common transfer lines without the use of pigging technology.
- + Provides clients with process systems that lower their ongoing manufacturing cost and increase their competitive advantage.

Don't have the in-house pigging technology expertise? Pigging Solutions partners with engineering firms to understand their client's application needs and then recommends effective solutions.

Why partner with Pigging Solutions? Over 20 years of experience and hundreds of satisfied customers and projects across a wide range of industry applications.

- + Industry knowledge. We understand process manufacturing and can design effective solutions for customer applications. From hazardous chemicals to food & beverage we have the expertise.
- + Wide range of solutions. Whether the application calls for a manual point-to-point system or a fully automated system capable of simultaneous transfers from multiple sources to multiple destinations, we have the solution.
 - Launchers & Receivers
 - Piggable Diverter & T-Port Valves
 - Piggable Schedule 10 ID Valves
 - Piggable Manifolds
 - Automation
 - Custom Hardware Fabrication
- + On-Site Services. Pigging Solutions provides installation support followed by assistance with commissioning and training.
- + Ongoing Support. We stand behind our systems and are available to assure they continue to perform efficiently year after year.

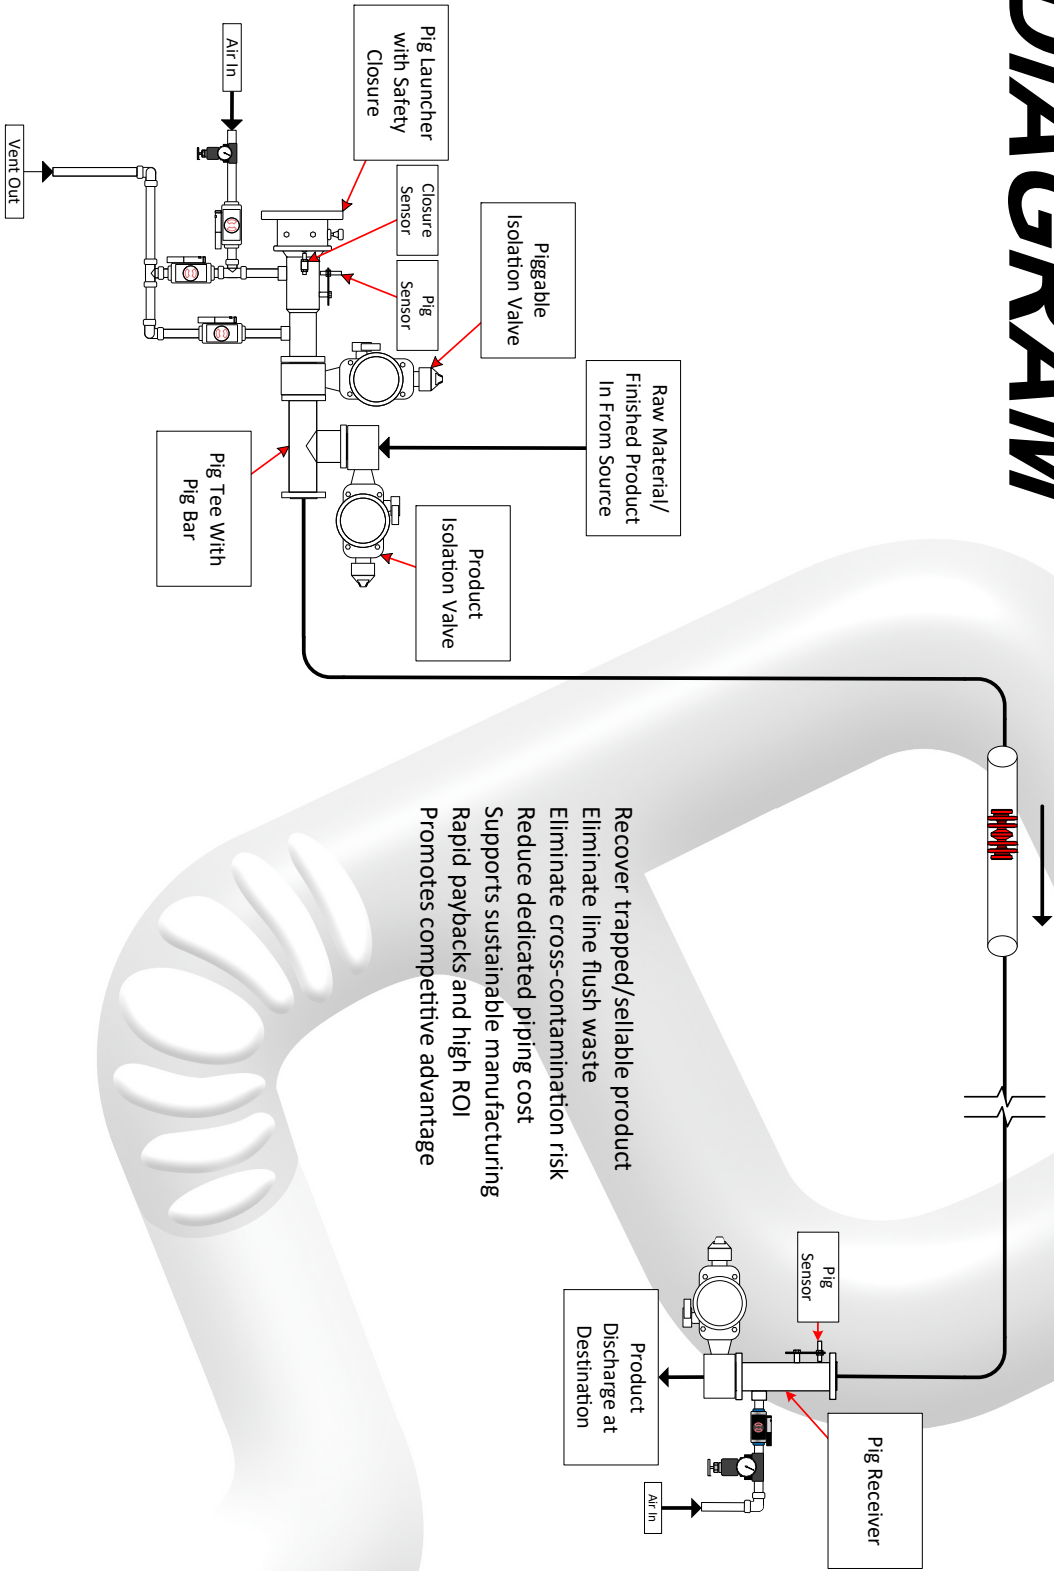

To learn more about our product recovery pigging technology visit our website and download our company brochure here.
