PIGGING & GREASE MANUFACTURING

Grease manufacturing is a competitive business, Piggig Solutions can help squeeze every penny out of each pound of grease, making your grease products more profitable and competitive.

The pigging systems we design can recover over 99% of trapped yet still sellable grease product within transfer lines. Pigging systems also wipe the pipe walls clean while leaving the line ready for the next product with minimal or no line flushing and waste.

What are the benefits to you as a manufacturer of lubricating grease?

- + Accurate base oil and additive delivery to batch kettles
- + Increased first-time on-spec finished grease batches
- + Recovery and sale of previously lost grease product from transfer lines
- + Significantly reduce or eliminate transfer line flushing and waste
- + Higher finished grease batch yields
- + Eliminate product cross-contamination risk
- + Easily manage a diverse product line with smaller batch sizes and filling runs
- + Increased manufacturing flexibility and ability to satisfy customer demands
- + Promotes Sustainable Manufacturing goals
- + Rapid payback and ROI

In addition to cost savings and the competitive advantages, Piggig Solutions' systems are easy and safe for operators to use. All pig launchers are equipped with the patented LQC pressure locking safety closure, providing safe access to pigs for routine maintenance in less than 15 seconds. The closure also protects the operator and the environment from accidental spills or pig release, as the LQC closure has a pressure locking feature which prevents opening while the system is under pressure.

Whether your grease transfer application calls for a simple manual point-to-point system, or you have the need for an automated system to make simultaneous transfers from multiple sources and destinations, Piggig Solutions will work with you to develop a pigging system that meets your specific application needs.

To learn more, call our lubricants industry specialist to set up a Teams meeting or complimentary site visit to review your grease transfer process and applicable pigging solution.

We also encourage you to visit our website at www.piggingsolutions.com where you will find typical pigging system sketches.
